Top GOLD

performance and overall quality!

Easy installation.
Within 30 minutes

Superior design and overall quality

A model available for almost any type of driving

Regular runner

As its name indicates it, there is no carbide on this runner. For this reason it is less expensive than the other types of product while comprising. This runner is appropriate to the sled rider who venture out of the paths and which do not cross paved roads.

Carbide runner

Qualipieces manufactures various runners with carbide. Among those, we find the runner with carbide tips of 1/8" by 90°, the 3/16" by 90° runner as well as the 1/8" by 60° equipped with 4", 6" and sometimes even 8" or 10" of carbide.

Double runner

This runner is mainly designed to completely eliminate darting from the snowmobile. **Qualipieces** offers this product with 4", 6" and sometimes even 8" of carbide. It should be noted that the principle used to remove darting entirely requires additional friction between the sled and the ground.
